Subject: Mitacs Globalink Early Career Fellowship – Brazil

Dear Madame/Sir

Please share this call for postdoctoral fellows with promising Brazilian candidates.

I am looking for a strong candidate with a background in Electrical Engineering and knowledge in Mechanical Engineering to jointly submit an application to the Mitacs Globalink Early Career Fellowship – Brazil. The application deadline is May 24th 2016.

This program provides a stipend of \$41,920 (CNPq and NSERC) to a postdoctoral fellow from Brazil to accomplish a one (1) year postdoctoral fellowship in a Canadian University.

The successful candidate will investigate thermal energy conversion systems at the University of Quebec in Outaouais (UQO). In particular, the successful candidate will carry forward investigations into a recent scientific contribution accomplished at UQO in which the Load-bearing Figure of Merit and the Load-bearing Seebeck coefficient were defined. These findings are published in IEEE transactions and show great promise for future publications.

I look forward to connecting with applicants.

Best regards,

Frédéric Jean Luc Lesage
Professeur agrégé (Associate Professor)
