

MOOC Biobased Economy Introduction

September 12th 2016 the Centre of Expertise Biobased Economy (HZ / Avans) will offer once again the MOOC Biobased Economy Introduction. This eight-week free online course provides an overview of the economy surrounding biotechnology. As a participant, you will learn about bio refineries, nutrients, biopolymers, bioenergy, and the cycle that takes products from biomass to world markets.

The course is available for free, particularly interesting for (under)graduate students, professors and professionals. Learning activities include online instructional videos, exercises, interesting guest speakers, and discussions that focus on the theory and practice of companies in the Dutch Delta working in this new economy. Additionally, you can participate in interactive case studies intended to challenge the shared brainpower of course participants (2 European Credits). The MOOC Biobased Economy Introduction focuses on green chemistry, technology and environmental science. Click [here](#) to watch the introduction movie.

Professional: *"I am very satisfied with this course and **it exceeded my expectations!** It covers a wide range of **topics** as well as enough depth. Interesting **company videos** and articles!"*

Undergraduate student: *"I really **enjoyed** having the opportunity to do this MOOC - it is not related to my field of study. With **the classic 'offline' teaching method** I'd never have been able to do it, probably.*

High school student: *It really stimulated me to dive further into this subject and helped a lot with my choice of study, I am a highschooler. This course **stimulated me** to choose to **study biotechnology** at Wageningen UR.*

Biobased Economy Introduction

MOOC – Massive Open Online Course

*With a focus on green chemistry, technology
and environmental science*
